

## **TAPE AS AN ERASER**

Colored pencil can be removed by using tape. Masking tape works for lifting large areas, but for critical work, you'll find transparent, removable tape (like Scotch Magic Plus) works best. For precision removal, apply the transparent tape and with a pointed but not sharp object (like a stylus or a ballpoint pen) firmly trace over the detail you want to remove. When you lift the tape, the detail will be picked up by the tape. For larger or random areas, apply masking tape and press with your finger or thumb to warm the applied pencil. Remove the tape. Color will be stuck to the tape.
